EE422C Project 3 (Word Ladder) Team Plan

David Chun dc37875
Robin Dhakal rd27955
Spring 2017

David did the BFS module and the neighbors method initially and we both sat down to debug and test the implementation. Robin worked on the DFS module using the neighbors method. We both developed test cases for testing the DFS module.
For each module, BFS and DFS, we wrote at least 5 test cases per to test each algorithm.

We spent approximately 4 hours in the same room but communicated frequently for updates and algorithm discussions.
